LEAST CONSISTENT PRICING 0.59 AC Repair (CoV)	SLOWEST CASH CYCLE 54d Property Management	AR OUTSTANDING \$256,610 total unpaid	AVERAGE TICKET \$2,192 all jobs

Top Findings RANKED BY IMPACT

The 7 issues costing this business the most, in order.

FINDING 01 / negative_margin_job_type Your Furnace Install jobs are losing money, with a negative gross margin of -32%. WHY IT MATTERS Every furnace installation you complete costs you more in labor and materials than you charge customers, which directly reduces your profits. At this rate, you're losing over \$316,000 annually on this service line. RECOMMENDED ACTION Review your furnace installation pricing, labor estimates, and material costs immediately to identify why this job type is unprofitable and adjust your pricing or operational approach. HOW MEASURED — Gross margin was calculated by comparing total revenue from furnace install jobs against the direct costs (labor and materials) associated with those jobs.	EST. ANNUAL IMPACT \$316,783
FINDING 02 / high_ar_outstanding Your shop has a total of \$256,610.35 in accounts receivable that remain outstanding. WHY IT MATTERS When customers owe you money for extended periods, it ties up cash that could be used for operations, equipment, or paying your own bills. High outstanding receivables reduce your available working capital and can strain your business's financial health. RECOMMENDED ACTION Review your accounts receivable aging report and implement a collection strategy to pursue overdue invoices, including follow-up calls, payment reminders, and if necessary, payment plans for large outstanding balances. HOW MEASURED — This figure represents the total dollar amount of all customer invoices that remain unpaid as of the measurement date.	EST. ANNUAL IMPACT \$256,610

FINDING 03 / low_win_rate_job_type

EST. ANNUAL IMPACT

\$169,144

Your Electrical Panel Upgrade quotes are converting to jobs at a low rate of 11.5%, compared to a target of 20% or better.

WHY IT MATTERS When you quote jobs that rarely convert to sales, you're spending time and resources on estimates that don't generate revenue. This low conversion rate is costing your business money in lost sales and wasted proposal efforts.

RECOMMENDED ACTION Review your recent Electrical Panel Upgrade quotes that didn't convert to identify whether pricing, scope clarity, or customer communication can be improved to increase your win rate on this job type.

HOW MEASURED — Win rate calculated as the number of Electrical Panel Upgrade jobs won divided by the total number of Electrical Panel Upgrade quotes issued.

FINDING 04 / inconsistent_pricing_job_type

EST. ANNUAL IMPACT

\$58,056

You're charging inconsistent prices for AC Repair jobs across your business.

WHY IT MATTERS When similar jobs are priced differently, you're either leaving money on the table or training customers to shop around. This pricing inconsistency is estimated to cost your business \$58,055.98 annually in lost revenue or margin.

RECOMMENDED ACTION Audit your last 20 AC Repair jobs to identify what variables drive price differences (complexity, location, time of day, technician), then establish a consistent pricing structure that accounts for these legitimate factors.

HOW MEASURED — The consistency of AC Repair pricing was measured by calculating the coefficient of variation (0.5864961406772482) across all AC Repair jobs in your system, which exceeds the acceptable threshold of 0.48.

FINDING 05 / slow_pay_segment

EST. ANNUAL IMPACT

\$50,120

Your Property Management customer segment takes significantly longer to pay invoices than your other customers.

WHY IT MATTERS When customers pay slowly, your cash flow is delayed, which can strain your ability to cover payroll, equipment purchases, and other operational expenses. This extended payment cycle ties up capital that could be reinvested in growing your business.

RECOMMENDED ACTION Review your Property Management contracts to establish earlier payment terms, implement a more aggressive invoicing and follow-up process for this segment, or consider requiring upfront deposits to reduce the impact of late payments.

HOW MEASURED — This metric compares the average number of days until payment is received from Property Management customers versus all other customer segments in your business.

FINDING 06 / high_callback_tech

EST. ANNUAL IMPACT

\$40,892

Technician T04 has a callback rate of 21.95%, which is significantly higher than the team median of 15%.

WHY IT MATTERS Callbacks represent wasted labor, parts, and vehicle downtime that reduce profitability and damage customer satisfaction. A callback rate this high indicates quality or completeness issues that are costing your business money on repeat visits.

RECOMMENDED ACTION Review T04's recent job records and quality control metrics to identify patterns in callbacks, then provide targeted coaching or retraining to address the root causes.

HOW MEASURED — Callback rate calculated as the number of jobs requiring a return visit divided by total jobs completed by technician T04.

Technician T09’s billable utilization is significantly below your target level.

\$22,106

WHY IT MATTERS When a technician isn't spending enough time on billable work, you're paying their salary while not generating revenue to match those labor costs. This directly reduces your profitability and shop efficiency.

RECOMMENDED ACTION Review technician T09's schedule and work assignments to identify scheduling gaps, non-billable tasks, or skill gaps that could be addressed through training or job assignments.

HOW MEASURED — The technician's billable utilization was calculated by dividing hours spent on billable work by total available work hours, which came to 43.25% compared to your 55% target.
